REPAIR AND TOOL MAKING PLANT

Torque wrench check and calibration

2020

We check and calibrate domestic and foreign scale and torque wrenches with the limits of 25–1100 N with standard and changeable tools.

Check and calibration

The check and calibration is performed on **Sensotork® STAHLWILLE.**

It provides high precision due to flat design of the sensor as well as due to primary machining and conversion of measurement values in digital form directly on the sensor.

It also provides high reliability due to additional display of the torque actually applied when tightening using limiting torque wrenches.
